

Reports and Data

SKATS collects and analyzes a variety of data from a number of sources. The data, or the resulting analysis, is used in planning studies and/or for the operation of the regional travel demand model. Federal legislation requires SKATS, as the MPO for the Salem-Keizer area, to report on a number of measures that represent the performance of the regional transportation system. Links to the reports and data are provided below. Also included are links to the Obligation Report, which is produced yearly to document the projects that have been completed during the past federal fiscal year.
