

What is GIS?

A GIS is a computer-assisted system for assembling, storing, manipulating, and displaying geographically referenced information, i.e. data identified according to their locations.

Other services that we provide:

- Website design, installation, and hosting.
- PC standardization, installation, support and networking.
- Server installation and support.
- GIS Server installation, configuration and support.
- Onsite GIS training and support.
- Custom consumer, business, Census 2000, and socio-demographic based services using our commercial marketing demographics data sets.
